Instructions:

Please read instructions carefully before attempting paper.

- 1) All questions are compulsory.
- 2) The question paper consists of 21 questions divided into two sections A & B. Section A comprise of 20 MCQs of 1 marks each. Section B comprises of 1 practical task having 80 marks.
- 3) Mobile Phone not allowed.
- 4) Use separate paper for rough work.

Section A - Theory (Total Marks: 20, Time: 30 Minutes)

1- How can a program receive user input in Python?

- (a) user_input()
- ☒ (b) input()
- (c) get_input()
- (d) read()

2- What is K-Mean Clustering used for?

- ☒ (a) Dividing data points into K clusters based on similarity.
- (b) Performing linear regression with K features.
- (c) Identifying the most important features in a dataset.
- (d) Finding the optimal value of K in machine learning.

3- What does the clear() method do in Python?

- (a) Retrieves an element at a specified index.
- ☒ (b) Removes all elements from the list.
- (c) Adds an element to the end of the list.
- (d) Reverses the order of elements.

4- What is Bootstrap primarily used for in web development?

- (a) Client-side scripting
- (b) Database management
- (c) Server-side scripting
- ☒ (d) Styling and responsive design

5- What is inheritance in Python?

- (a) A function that overrides built-in functions.
- (b) A loop structure for iteration.
- ☒ (c) A mechanism for creating new classes that inherit properties from existing classes.
- (d) A method of copying code from one module to another.

6- What does the index() method in Python return?

- (a) The middle occurrence of a specified element.
- (b) The total number of occurrences of a specified element.
- ☒ (c) The first occurrence of a specified element's index.
- (d) The last occurrence of a specified element's index.

7- What do syntax and semantics refer to in programming?

- (a) Neither term is related to programming.
- ☒ (b) Syntax is the structure of code, and semantics is its meaning.
- (c) Both refer to the same concept.
- (d) Syntax is the meaning of code, and semantics is its structure.

8- Which programming language is commonly used for client-side scripting in web development?

- (a) C++
- (b) Java
- ☒ (c) JavaScript
- (d) Python

9- Which operator is used to compare two values for equality in Python?

- (a) <>
- ☒ (b) ==
- (c) !=
- (d) =

10- Which method returns a list of all the values in a dictionary?

- (a) items()
- (b) keys()
- (c) values()
- ☒ (d) get()

11- What are accessors in Python?

- (a) Functions that modify class attributes.
- (b) Reserved keywords.
- ☒ (c) Functions that return class attributes.
- (d) Special operators.

12- What is programming?

- (a) Creating only hardware components.
- (b) Designing user interfaces.
- ☒ (c) Writing code to instruct the computer to perform tasks.
- (d) Assembling physical devices.

13- Which Python web framework is commonly used for building RESTful APIs?

- (a) Flask
- ☒ (b) Django
- (c) Pyramid
- (d) Tornado

14- What is abstraction in Python?

- (a) A way to define optional arguments.
- (b) A method of creating packages.
- ☒ (c) A principle of displaying only essential information and hiding unnecessary details.
- (d) A technique for defining classes.

15- What data type in Python is similar to a list but is immutable?

- (a) List
- (b) Set
- (c) Array
- ☒ (d) Tuple

16- What is encapsulation in Python?

- (a) A technique for writing loops.
- (b) A way to define default arguments.
- (c) A method of calling functions.
- ☒ (d) A process of hiding implementation details and showing only the necessary features of an object.

17- In Python, do you need to use semicolons to terminate statements?

- (a) Sometimes
- (b) Depends on the code
- ☒ (c) No
- (d) Yes

18- In a dictionary, which method returns a list of all the keys?

- ☒ (a) keys()
- (b) values()
- (c) items()
- (d) get()

19- What does the return statement do in a Python function?

- (a) It initializes a variable.
- ☒ (b) It outputs a value from the function and stops its execution.
- (c) It imports a module.
- (d) It prints a message to the console.

20- What process involves identifying and fixing errors in code?

- (a) Profiling
- (b) Optimizing
- (c) Testing
- ☒ (d) Debugging

- 4) Use separate paper for rough work.

Section B - Practical (Total Marks: 80, Time: 2:30 Minutes)

1- Develop a program that reads a list of student names and generates a random order for conducting presentations. Sample List: ["Alice", "Bob", "Eve", "David"]

__The End__

```
index.py > ...
1  # DEVELOP A PROGRAM THAT READS A LIST OF STUDENT NAMES AND GENERATES
2  # A RANDOM ORDER FOR CONDUCTING PRESENTATIONS.
3  # SAMPLE LIST: ["Alice", "Bob", "Eve", "David"]
4  import random
5  students = ["Alice", "Bob", "Eve", "David"]
6  random.shuffle(students)
7
8  print("Random presentation order:")
9  for i, name in enumerate(students, 1):
10     print(i, name)
```

PROBLEMS OUTPUT ... Filter (e.g. text, lexcludeText, t...) Code

[Running] python -u "c:\Users\ABC\Downloads\NAVTCC PAPER\index.py"

Random presentation order:

1 David
2 Alice
3 Eve
4 Bob

[Done] exited with code=0 in 2.384 seconds

DELL

```
index.py > ...
1 # DEVELOP A PROGRAM THAT READS A LIST OF STUDENT NAMES AND GENERATES
2 # A RANDOM ORDER FOR CONSIDERING PRESENTATIONS.
3 # SAMPLE LIST: ["Alice", "Bob", "Eve", "David"]
4 import random
5 students = ["Alice", "Bob", "Eve", "David"]
6 random.shuffle(students)
7
8 print("Random presentation order:")
9 for i, name in enumerate(students, 1):
10     print(i, name)
```
